

NARROW POSITIONING			
Features	- AI voice-to-text transcription - Auto summaries & key highlights - Action item extraction - Tagging & smart organization - Full-text search across voice notes - Cross-device sync (mobile-first) - Easy sharing & export		
Benefits	- Save time by not re-listening to long recordings - Never lose ideas captured on the go - Turn raw voice into usable, structured content - Faster recall of thoughts, meetings, and notes - Stay organized without manual effort		
Use Cases	- Capturing ideas while walking, driving, or multitasking - Meeting notes and quick debriefs - Personal journaling and reflections - Content brainstorming for creators - Study notes and revision from voice memos		
Job to Be Done	"Help me capture my thoughts by voice and quickly turn them into something I can find, understand, and act on later."		
Outcomes / Transformations	- From scattered voice memos — organized knowledge - From forgotten ideas — actionable insights - From time wasted replaying — instant clarity - From messy notes — searchable personal archive		
Product Categories	- Voice AI tools - Note-taking apps - Productivity & knowledge management software - AI transcription tools - Personal knowledge base (PKB)		
Unique Attributes	- Built specifically for voice-first thinkers, not text-first users - Mobile-native experience (not desktop-first transcription) - Automatic structuring, not just raw transcripts - Fast capture - instant value loop - Designed for daily, lightweight use (not heavy meeting software)		
CUSTOMER NEEDS			
	Target A	Target B	Target C
Pain Points (Top of Mind Every Day)	- Ideas disappear if not captured instantly - Too busy to write or structure notes	- Too much information, too little clarity - Forgetting what was recorded weeks ago	- Meetings overload - Important details get lost in chats and calls
Pain Points (Related to our Category/Product/Solution)	- Voice memos are unsearchable - Transcription tools feel slow or clunky	- Manual note-taking is exhausting - Transcripts are long and hard to revise	- Existing tools focus on meetings, not thinking - Notes scattered across apps
High Level Aspirations	- Think freely and move faster - Build ideas into real outputs	- Study smarter, not longer - Retain and understand concepts	- Stay organized without extra effort - Be seen as efficient and reliable
Frustrations with Status Quo or Competing Solutions	- Apple Voice Memos = storage, not thinking - Notion is too heavy for quick capture	- Otter transcripts are overwhelming - Manual summaries take too long	- Meeting tools don't work for personal notes - Switching between apps breaks flow

Top Priorities	Speed	Accuracy	Reliability
	Simplicity	Clear summaries	Cross-device access
Willingness to Pay	Reusability of ideas	Easy search	Actionable outputs
	Medium–High	Low–Medium	Medium
	Will pay if it saves time or boosts output	Needs free tier or student pricing	Pays if it improves productivity consistently
Current Tech Stack (ERP, CRM, Etc.)	Apple Voice Memos / WhatsApp voice	Lecture recordings	Zoom / Meet
	Notion, Google Docs	Google Docs, PDFs	Slack, Google Workspace
Barriers to Reaching Goals	Random note apps	Note-taking apps	Task tools (Asana, Clickup, etc.)
	Inconsistent capture habits	Lack of structure	Context switching
	Tool overload	Time pressure before exams	Notes living in too many places

CUSTOMER AWARENESS

Problem Unaware	Feels ideas slipping away but accepts it as normal	Records lectures without revisiting them	Accepts meeting overload as unavoidable
	Thinks “I’ll remember this later”	Assumes forgetting is part of studying	Doesn’t realize notes are the bottleneck
	Blames busyness, not tooling	Focuses on volume, not recall	Thinks productivity issues are about time
Category Unaware	Doesn’t know “voice-first note systems” exist	Thinks transcription tools are only for meetings	Associates voice tools with call recording only
	Sees voice memos as storage, not workflow	Unaware of AI summaries for study notes	Unaware of personal voice AI category
Product Unaware	Has never heard of Sluqe	Uses generic note or recording apps	Relies on work tools already provided
	Uses default phone recorder or WhatsApp voice	Not actively searching for alternatives	Doesn’t look beyond team software
Product Aware	Knows Sluqe exists but unsure of daily value	Tried transcription but not summaries	Tested once for meetings
	Curious but hasn’t formed a habit	Unsure if it helps exam performance	Unsure if it fits personal workflow
Objections to Buying/Trying	“Another app to manage”	“Too expensive for a student”	“Work already has tools”
	“Will I actually use it daily?”	“Accuracy might be bad”	“Privacy and data security concerns”
	“Is it better than free voice memos?”	“Free tools are enough”	“Setup time feels high”

PRIORITIZATION

Logical Positioning Based on Above	Voice-first idea capture → summaries → reuse	Lecture capture → summaries → revision	Meeting capture → action items → recall
	Positioned as a daily thinking tool	Positioned as study efficiency tool	Positioned as personal productivity support

Financial Value of Each Attribute	Time saved = faster output → higher earning leverage	Indirect financial value (better grades, less tutoring)	Time savings reduce work friction
	Direct ROI tied to productivity	Price sensitivity remains high	Moderate ROI justification via efficiency
Quantified Value of Each Attribute (Non-Financial)	Fewer lost ideas	Improved retention	Fewer missed action items
	Faster retrieval of past thoughts	Shorter revision time	Better follow-through
Survey Results	Lower cognitive load	Better concept clarity	Reduced mental clutter
	Strong interest in speed and simplicity	High interest in summaries	Interest in action items and reliability
Interview Results	High preference for voice-first tools	Price and accuracy concerns dominate	Privacy frequently mentioned
	"I just want to talk and move on"	"I don't have time to rewrite notes"	"Notes are everywhere"
Focus Group Results	Re-listening is the biggest pain	Wants shorter, clearer outputs	Needs one trusted place
	Preference for lightweight, fast UX	Wants clear structure, not raw text	Values consistency across devices
Positioning Strategically Aligned with Company	Dislikes heavy dashboards	Prefers guided summaries	Cares about data control
	Strong alignment with voice-first vision	Aligns with long-term growth, not short-term revenue	Aligns with future B2B expansion
Relative Importance of Each Attribute to Buyer	Early adopters fit roadmap	Requires pricing flexibility	Not core wedge today
	Speed > simplicity > reuse	Accuracy > summaries > search	Reliability > organization > action items
Empirical Test Results	Accuracy is "good enough"	Speed is secondary	UX consistency matters
	Highest activation and repeat usage	Good trial usage, weaker retention	Moderate adoption
	Strong habit formation	Drops without exams pressure	Strong value when integrated into workflow

COMPETITION	Sluqe	Mem. ai	Voicenotes .com
Direct Competitors	Voice-first AI focused on quick capture, auto summarization, action items, tagging & powerful search	AI thought partner and knowledge-base + voice capture app. Offers deep AI search, auto structuring, proactive insight surfaces, voice note capture & summaries via Voice Mode. (help , mem.ai)	AI voice note recorder + transcriber with optional subscriptions. Known domain with long existence (since ~2001) now repurposed as voice note AI tool. (ScamAdviser)
Status Quo Solution (E.g., Spreadsheets)	Spreadsheets, index cards, phone voice memos, manual transcription	Default phone recorder + manual notes (e.g., Apple Voice Memos + Notion/Docs)	Recording voice memos in native apps or basic transcription tools (manual filling/editing)
Points of Difference	- Built specifically for voice-first workflows vs general notes tools - Instant action items & highlights - Intuitive cross-device organization = "notes that work for your workflow"	- Acts as active AI assistant/second brain (suggests related info) not just storage. (aitoolnet.com) - Deep search, context-aware retrieval. (5app.ai) - Multi-modal capture (email, web, voice). (App Store)	- Simple, lightweight voice recording + transcription. - Promises support for multiple languages and editable outputs. (Voicenotes)
Points of Parity	- Voice → text transcription - Searchable archive of voice data	- Transcription + summaries similar to other voice AI tools. - Sync across devices. (aitoolnet.com)	- Converts speech to text and provides search over notes (core to many voice tools). - Basic organization features like tagging/folders.

Points of Irrelevance	- Deep contextual search as a “second brain” (like Mem’s proactive surfacing)	- Notion-style manual knowledge management (because Mem is AI-driven, not manual tag/folder based). - Simple voice memos without AI structuring.	- Full AI “assistant” summarization beyond transcripts may be weaker/not emphasized. - Deep knowledge linking & proactive context suggestion.
